## Forecasting:

## Where Are the Next Five Years Taking Us?

Kevin Hillstrom

@minethatdata

I have spent nearly thirty years analyzing products, brands, and customers. In this time, I have not witnesses a period where forecasting future business performance has been of such interest. This spring alone, nearly twenty companies have partnered with me to measure the five-year trajectory of their products, brands, and channels. It is clear that "something has changed", and business leaders need to understand what the future holds, and then do something to pre-empt negative outcomes. In more than ten years of consulting work including project work for more than two-hundred brands, my forecasting work has never been more popular.

## A General Framework

Forecasting projects do not have to be complicated to produce actionable insights. The secret is to create unique customer segments, segments that behave differently enough in the future to provide interesting outcomes.

I use a Principal Components Analysis to segment customers based on annual customer behavior. If a customer purchased in each of the past five years, then I enter five customer records into the analysis, one summarizing each year of purchase activity. I sum annual spend, then take the square root of annual spend. In addition, I calculate percentage of annual spend in each marketing channel and in each product category. The variables are entered into the Principal Components Analysis.

The Principal Components Analysis yields two "dimensions". I segment each of the two "dimensions" into seven segments. Then I segment customers based on $7 \times 7=49$ combinations. The 49 combinations yield customers with sufficiently different behavior to crate interesting future forecasting permutations.

## Probability of Future Behavior

For each customer, I identify the $7 \times 7=49$ segment combination the customer belongs to. Let's pretend that there are 1,000 customers in a segment. Then, I measure the percentage of customers in the segment (last year) that repurchase this year. Once I identify the percentage (pretend it is $35 \%$ ), I measure the percentage of customers that migrate to each of the $7 \times 7=49$ segment combinations next year.

Let's pretend that there are just 5 segment combinations, and let's pretend that the customer has a $35 \%$ chance of buying again next year. I then calculate future migration into next year's segments.

- $20 \%$ move to Segment 1.
- $40 \%$ move to Segment 2.
- 10\% move to Segment 3.
- $20 \%$ move to Segment 4.
- $10 \%$ move to Segment 5 .

I apply the $35 \%$ chance of repurchase by the segment-level repurchase rates, yielding the following:

- $(1-0.35)=65 \%$ do not repurchase, and move into a 13-24 month segment combination.
- 0.35 * $0.20=7 \%$ move to Segment 1 .
- $0.35{ }^{*} 0.40=14 \%$ move to Segment 2.
- $0.35{ }^{*} 0.10=3.5 \%$ move to Segment 3 .
- $0.35 * 0.20=7 \%$ move to Segment 4 .
- 0.35 * $0.10=3.5 \%$ move to Segment 5 .

This is the procedure for five segments.
I apply the same methodology to all $7 \times 7=49$ segment combinations.
If a customer repurchases, I measure how much a customer spends next year ... in total, and by marketing channel, and by product category.

Combine all of these elements together, and we can forecast how customers are likely to evolve over time - over the next five years in my case. The methodology allows me to see how a business is likely to evolve and change.

Let's look at a brief example. This business is forecast to remain flat or decline slightly over time.

| 49 Segment Forecasting Algorithm - Merchandise + Channels |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |
|  | Year-1 | Today | After Yr 1 | After Yr 2 | After Yr 3 | After Yr 4 | After Yr 5 |
|  |  |  |  |  |  |  |  |
| 12 Month Buyers | 123,042 | 119,530 | 116,203 | 114,174 | 112,715 | 111,752 | 111,060 |
| Existing Buyers |  | 36,538 | 35,891 | 34,900 | 34,286 | 33,838 | 33,539 |
| Reactivated Buyers |  | 28,524 | 25,844 | 24,807 | 23,961 | 23,446 | 23,053 |
| New Buyers |  | 54,468 | 54,468 | 54,468 | 54,468 | 54,468 | 54,468 |
| Total Demand (000s) |  | 18,412.6 | 17,936.5 | 17,631.8 | 17,414.3 | 17,266.9 | 17,160.5 |
| Total Orders (000s) |  | 160.6 | 156.2 | 153.3 | 151.2 | 149.9 | 148.9 |
| Total Items (000s) |  | 631.1 | 614.2 | 603.0 | 594.9 | 589.4 | 585.4 |
|  |  |  |  |  |  |  |  |
| Retention Index |  |  | 1.000 | 1.000 | 1.000 | 1.000 | 1.000 |
| New Buyer Index |  |  | 1.000 | 1.000 | 1.000 | 1.000 | 1.000 |
|  |  |  |  |  |  |  |  |
| 12 Month Buyer Change |  |  | -2.8\% | -1.7\% | -1.3\% | -0.9\% | -0.6\% |
| 12 Month Demand Change |  |  | -2.6\% | -1.7\% | -1.2\% | -0.8\% | -0.6\% |
| 12 Month Orders Change |  |  | -2.8\% | -1.8\% | -1.3\% | -0.9\% | -0.7\% |
| 12 Month Items Change |  |  | -2.7\% | -1.8\% | -1.4\% | -0.9\% | -0.7\% |
|  |  |  |  |  |  |  |  |
| Average Order Value |  | \$114.62 | \$114.87 | \$115.03 | \$115.15 | \$115.23 | \$115.27 |
| Items per Order |  | 3.93 | 3.93 | 3.93 | 3.93 | 3.93 | 3.93 |
| Price per Item Purchased |  | \$29.18 | \$29.20 | \$29.24 | \$29.27 | \$29.30 | \$29.31 |
| Orders per Buyer |  | 1.34 | 1.34 | 1.34 | 1.34 | 1.34 | 1.34 |
| Demand per Buyer |  | \$154.04 | \$154.36 | \$154.43 | \$154.50 | \$154.51 | \$154.52 |

The methodology allows me to see what happens if customer loyalty is improved. If merchandise productivity can be demonstrated to increase by $5 \%$ (based on other analytics), then I can plug the figures into the retention index and see what might happen (the figures are plugged into new customer counts as well).

49 Segment Forecasting Algorithm - Merchandise + Channels

| Total Orders (000s) |  | 160.6 | 164.0 | 163.3 | 162.5 | 162.0 | 161.8 |
| Total Items (000s) |  | 631.1 | 644.9 | 642.9 | 639.9 | 638.2 | 637.3 |
|  |  |  |  |  |  |  |  |
| Retention Index |  |  | 1.050 | 1.050 | 1.050 | 1.050 | 1.050 |
| New Buyer Index |  |  | 1.050 | 1.050 | 1.050 | 1.050 | 1.050 |
|  |  |  |  |  |  |  |  |
| 12 Month Buyer Change |  |  | 2.1\% | -0.6\% | -0.5\% | -0.3\% | -0.1\% |
| 12 Month Demand Change |  |  | 2.3\% | -0.3\% | -0.4\% | -0.2\% | -0.1\% |
| 12 Month Orders Change |  |  | 2.1\% | -0.4\% | -0.5\% | -0.3\% | -0.1\% |
| 12 Month Items Change |  |  | 2.2\% | -0.3\% | -0.5\% | -0.3\% | -0.1\% |
|  |  |  |  |  |  |  |  |
| Average Order Value |  | \$114.62 | \$114.87 | \$114.99 | \$115.08 | \$115.12 | \$115.13 |
| Items per Order |  | 3.93 | 3.93 | 3.94 | 3.94 | 3.94 | 3.94 |
| Price per Item Purchased |  | \$29.18 | \$29.20 | \$29.20 | \$29.22 | \$29.22 | \$29.23 |
| Orders per Buyer |  | 1.34 | 1.34 | 1.35 | 1.35 | 1.35 | 1.35 |
| Demand per Buyer |  | \$154.04 | \$154.36 | \$154.80 | \$154.94 | \$154.97 | \$154.96 |

Notice that the business does not become healthy - growth is still tepid.

Let's remove the 5\% increase in merchandise productivity, and instead see what happens when new customer counts increase by 10\% per year, every single year going forward.

| 49 Segment Forecasting Algorithm - Merchandise + Channels |  |  |  |  |  |  |  |

In this case I use numbers to protect the originator of the data - in actual projects, I list the product category and the channel.

I also forecast what segment counts are going to look like in the future. This table shows us where each segment "was" and what the counts will look like in the future.

## Evolution of the Customer File by Segment

| Segment | Year -4 | Year -3 | Year -2 | Year -1 | Today | Year +1 | Year +2 | Year +3 | Year +4 | Year +5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 11 | 5,356 | 5,630 | 5,052 | 4,372 | 3,638 | 3,723 | 3,898 | 4,115 | 4,369 | 4,653 |
| 12 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 13 | 308 | 206 | 158 | 144 | 138 | 136 | 140 | 146 | 154 | 164 |
| 14 | 9,768 | 6,878 | 5,474 | 5,948 | 5,440 | 5,526 | 5,741 | 6,042 | 6,401 | 6,802 |
| 15 | 9,376 | 6,936 | 6,178 | 6,672 | 7,880 | 7,995 | 8,272 | 8,654 | 9,125 | 9,669 |
| 16 | 746 | 712 | 556 | 422 | 446 | 449 | 459 | 481 | 507 | 537 |
| 17 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 21 | 9,036 | 8,500 | 8,644 | 7,766 | 6,482 | 6,605 | 6,885 | 7,257 | 7,699 | 8,193 |

The data shows me that Segment " 35 " is growing faster than most segments. I looked at the composition of Segment "35".

- Spent \$96.97 last year.
- 1.13 Orders last year.
- More than $90 \%$ of spend in Merchandise Category 01.
- More than $70 \%$ of spend in Marketing Channel 05 (which was Search).

I then looked at counts for new + reactivated buyers in Segment "35".

- 2,080 last year.
- 2,458 this year.

I can tell that marketing increased the search budget, resulting in more customers in Merchandise Category 01 via Search.

I can then look at where these customers migrate to in the next year.

- $80 \%$ of future dollars in Merchandise Category 01.
- $50 \%$ of future dollars online without email/search.
- $25 \%$ of future dollars online via search.
- Customers distribute to $>20$ different segments in the future (they behave in a diverse manner).

So the customer remains mostly loyal to online, to Merchandise Category 01, and is not generally loyal to search going forward but will buy from many channels and will spend varying amounts of money.

Recall our base forecast.

We can adjust the number of customers that are new + reactivated, based on historical trends, and see if this impacts the trajectory of the business.

Trend data shows us that this company is generally acquiring new customers that are even less valuable than the customers that were acquired historically. The business is evolving.

The base forecast for changes in demand by Merchandise Category and Marketing Channel looks like this:

| MerchCat | Year 0 | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 | Channel | Year 0 | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 |  |  |  |  |  |  | 0 |  |  |  |  |  |  |
| 1 |  | -2.5\% | -1.7\% | -1.3\% | -0.9\% | -0.6\% | 1 |  | -3.0\% | -2.1\% | -1.4\% | -0.9\% | -0.7\% |
| 2 |  | -2.8\% | -1.5\% | -0.9\% | -0.7\% | -0.5\% | 2 |  | -2.2\% | -1.7\% | -1.4\% | -0.9\% | -0.7\% |

| 7 |  | -6.1\% | -1.6\% | -1.1\% | -0.6\% | -0.5\% | 7 |  |  |  |  |  |  |
| 8 |  | -8.8\% | -1.7\% | -0.9\% | -0.4\% | -0.2\% | 8 |  |  |  |  |  |  |
| 9 |  | -4.8\% | -1.4\% | -1.0\% | -0.6\% | -0.4\% | 9 |  |  |  |  |  |  |
| 10 |  | -4.4\% | -0.4\% | -0.6\% | -0.4\% | -0.5\% | 10 |  |  |  |  |  |  |
| 11 |  |  |  |  |  |  | 11 |  |  |  |  |  |  |
| 12 |  | -3.3\% | -1.4\% | -0.9\% | -0.6\% | -0.2\% | 12 |  |  |  |  |  |  |
| 13 |  | 4.7\% | 0.0\% | 0.0\% | 0.0\% | 0.0\% | 13 |  |  |  |  |  |  |
| 14 |  | -0.3\% | -0.7\% | -0.7\% | -0.5\% | -0.3\% | 14 |  |  |  |  |  |  |

Here, we observe that customer acquisition trends are in Merchandise Category 01, and are in Marketing Channels $2 / 4$ (which are print marketing and email marketing). The business is struggling to acquire customers online, via search, and within Merchandise Category 01.

Interestingly, the fastest growing segment was Segment "35" (low dollars, search, merchandise category 01). The customers being acquired are only buying small quantities, hence, the segment is growing. This is not a good trend.

## The Most Popular Project Request of 2017

Five-year forecasts are the most popular project request I am receiving this year, and for good reason. Modern analytics approaches tend to avoid forecasting what is likely to happen. And yet, the Executive Teams we work with have to understand where our businesses are headed, so that they can make good decisions going forward.

I am more than happy to continue to analyze these projects on an as-needed basis. Project costs tend to fall within my "Fix It" framework.

That being said, there is no reason this methodology could not be operationalized and converted into software that enables ALL PROFESSIONALS to have access to forecasting outcomes. There is no reason why all digital analysts should be in the dark. Think about how much more effective we all could be if we knew what the future held?

This is why I am open to discussing the forecasting methodology with the service provider community. Think about how powerful the methodology might be within the framework of Google Analytics, for instance? Or within Adobe's solutions?

If you are interested in purchasing development of this solution, please contact me at kevinh@minethatdata.com or at 206-853-8278.

Thanks,
Kevin
